

REPORT OF CHIEF ENGINEER
HUDSON RIVER - BLACK RIVER REGULATING DISTRICT
BOARD MEETING
APRIL 9, 2024 – MAYFIELD, NEW YORK

HUDSON RIVER AREA - MARCH SUMMARY

Reservoir Operation

Great Sacandaga Lake

The March average daily release from the Sacandaga Reservoir (Great Sacandaga Lake) was approximately 2,240 cubic feet per second (cfs). The Upper Hudson / Sacandaga River Offer of Settlement target elevation for March 31 is 749.12 feet (ft.). The release of water from Great Sacandaga Lake was consistent with the Upper Hudson/Sacandaga River Offer of Settlement.

HUDSON RIVER AREA - MARCH SUMMARY- continued

Operation Overview

Operation Overview

Precipitation during the month of March was above average in the Great Sacandaga Lake watershed and above average in the Indian Lake watershed. The monthly inflow to Great Sacandaga Lake and Indian Lake reservoir was approximately 148% and 154% of historic average, respectively. Monthly release of water from Great Sacandaga Lake and Indian Lake measured 108% and 70% of historic average, respectively.

Great Sacandaga Lake Operation

Great Sacandaga Lake operation summary report for the period March 1, 2024 through March 24, 2024 is attached. This report includes projected and forecast values for dates after March 24, 2024.

Hudson River Area Staff Activities

Staff completed routine maintenance and operations activities during the month.

A summary of Regulating District staff activities and work projects at the dam facilities is attached in the Operations Manager's Report.

BLACK RIVER AREA – MARCH SUMMARY

Reservoir Operations

Stillwater Reservoir

The March average daily release from Stillwater Reservoir was approximately 290 cfs. The maximum discharge for the month was 600 cfs.

Precipitation

Monthly total precipitation measured 79%, 70%, 83% of historic average at Stillwater, Old Forge, and Sixth Lake, respectively, as of March 19.

Table 5.0 - Black River Basin Precipitation - as of March 19

Station	Monthly Total (inch)	Historic Average (inch)
Stillwater	2.65	3.34
Old Forge	2.48	3.56
Sixth Lake	2.69	3.25

BLACK RIVER AREA - MARCH SUMMARY - continued

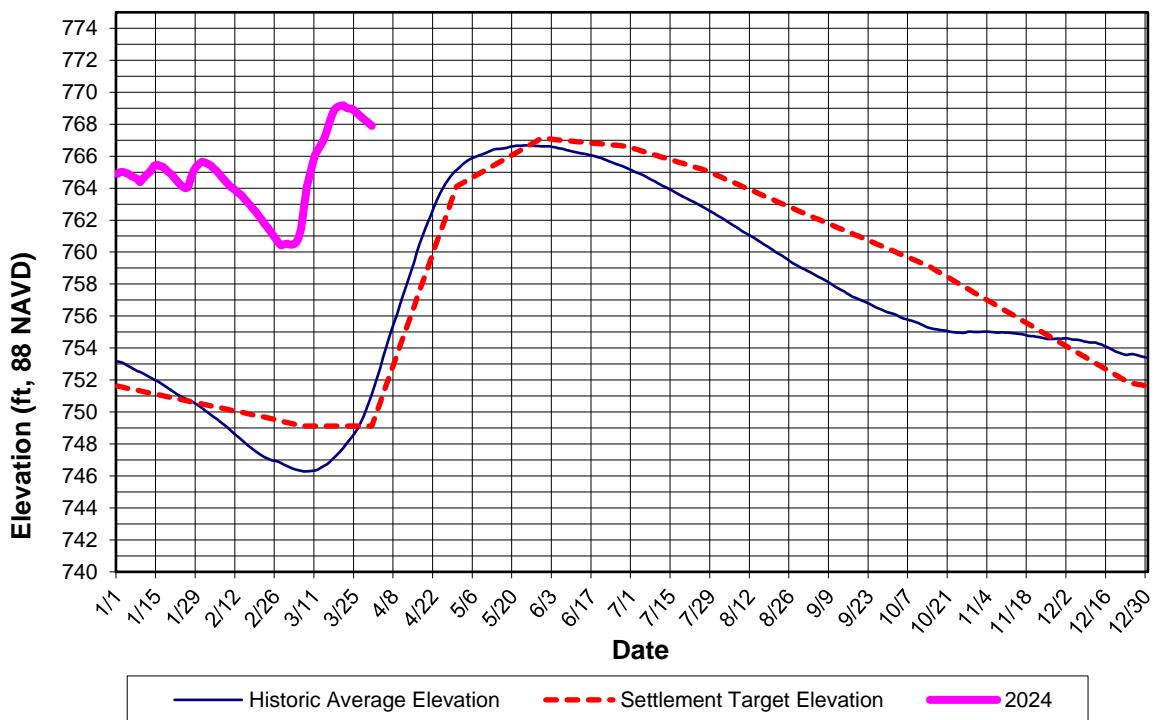

Operation Overview

Precipitation in the month of March was below average at Stillwater and below average at Sixth Lake and Old Forge Reservoir. The monthly inflow to Stillwater Reservoir was approximately 106% of historic average. The inflow to Sixth Lake and Old Forge Reservoir totaled 0.16 and 0.35 billion cubic feet, or 94% and 100% of historic average, respectively, in March. Release of water from Stillwater Reservoir provided 70% of historic monthly average discharge.

Indian River Lake Dam Rehabilitation Project (State ID#169-0758)
Construction Progress Report

Report No: 05

Period: 02/17/24 through 03/15/24

Date: March 15, 2024

Prepared for: Donald E. Canestrari, John Smith
Bureau of Flood Protection and Dam Safety, Division of Water

Prepared by: Colliers Engineering & Design

On behalf of the Hudson River Black River Regulating District (HRBRRD), Colliers Engineering & Design has prepared this letter in accordance with the requirements of the Dam Safety Permit – Condition 9 – Construction Reports.

Contractor's Progress Schedule, including revisions:

- The most recent construction schedule is dated February 20, and is attached to this progress report. Revision to this schedule is anticipated and updates will be provided once received.

Summary of major work completed during period:

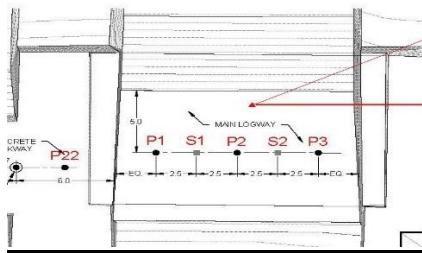

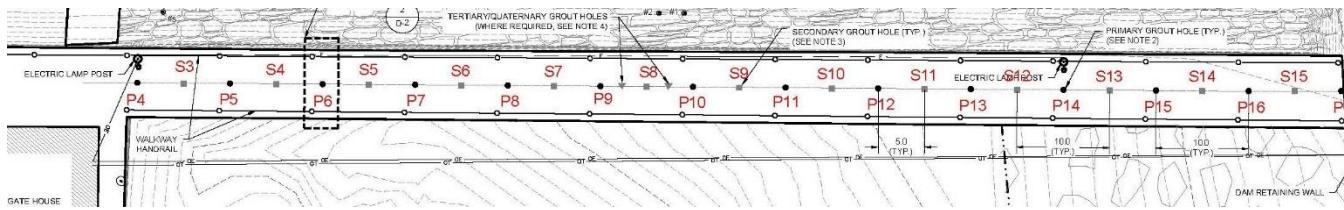

- SWPPP reports. – SWPPP Inspections conducted weekly, and reports located in binder onsite.
- Demolition – Removed walkway bridge over Main Logway. Removed the first course of stone in Main logway for new bridge seat concrete placement. Removed the first course of stone on spillway piers to allow for drilling of anchors and placement of anchor pads.
- Coring – Continued coring the first 3 feet of primary grout holes in advance of drilling and grouting operations. Completed primary hole 3 and secondary holes 1 and 2 in Main logway Sill. Cored to 20' at primaries 10 and 11 on the non-overflow section of dam.
- Grouting – Grouted primary hole 3 and secondary holes 1 and 2 in Main logway Sill. Grouted 20' at primaries 10 and 11 on the non-overflow section of dam.
- Forming – Began forming for concrete placement at Main logway bridge seat.

Summary of observations made by the on-site representative:

- Daily reports can be provided upon request.

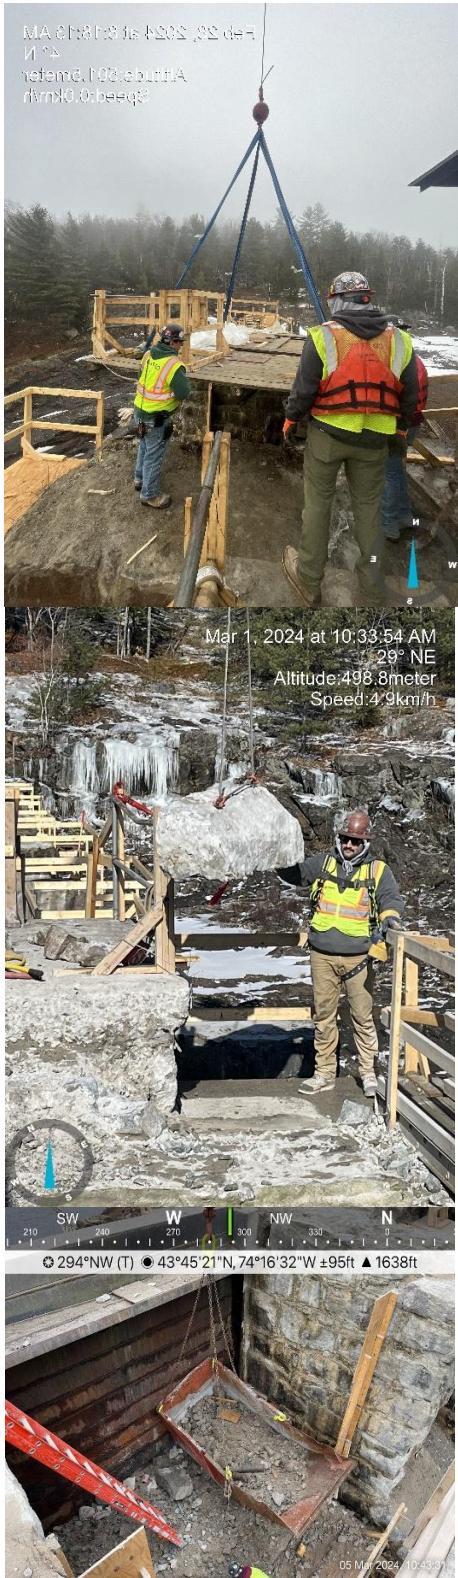

Summary of observations made by the construction engineer during his site inspections:

- During the water testing procedure in the Main logway, it was observed that in primary hole #3 and secondary #2 there was a large volume of water exfiltration for all three 5-minute iterations of the test. Conversely secondary #1 had a small volume of water exfiltration as well.
- Grouted Main logway primary hole #3 and secondary holes #1 and #2. During the grouting of secondary hole #1 it was found that within the top 1 foot of the hole there was a void located between two stone where the mortar seems to be eroded completely and the approved secondary mix would need to be used. The void was able to be filled and the remaining portion of primary #1 that was suspended was completed at that time. Grout operations moved to primary hole #3. No issues were observed with grouting. Secondary #2 was grouted and no issues arose during the process. Grouted primaries #10 and #11 on the non-overflow section of dam. Both primaries encountered issues with exfiltration on the upstream side of the dam. Once the leakage was spotted the grout mixture was changed along with stoppage methods being employed.
- No dam-safety specific visit has been made to the site yet, as the schedule progresses, and more work is performed site visits will be scheduled for priority activities and observations.

Summary of work planned for the next two (2) weeks:

- Continue coring of primary and secondary grout holes in preparation for grouting operations.
- Continue grouting operations.
- Begin demolition of main logway sill.

Construction reports will continue to be generated and submitted throughout the duration of construction. Please do not hesitate to contact us at (315) 705-3894 should you have any questions or require additional information.
